Team: Matthew Sredojevic, Hannie Ngo, Aliisa Roe, Robert Ladd

Title: ElectronXchange

Description: A web application designed to help people locally buy and sell electronics

Actors: Local people looking to exchange computer hardware

Functionality:
- Users can create an account
- Users have a catalogue/inventory of items they own
- Users can browse local electronics
- Users with accounts can put electronics on the market
- Users with accounts can exchange items from the market
- Users to be able to specify their preferred hardware (Mac vs Windows or something of the sort) and their conditions

Stretch Functionality:
- The ability for users to rate other users and their products
- Implement a machine learning library to show recommended products to users
- A way for providers to implement API's from their own product based websites
